

experts in air & vacuum

Ice heave can be a nightmare that robs Marina Operators of sleep.

Why not let us take care of your pontoons and jetties so that you can rest easy this winter? You know, that very soon, the winds will howl and old man winter will grip. The ice will form and start shifting and heaving away at all your in water installations. Why not take a rest in the assurance that all your piles will remain in place and that the electricity will not cost the price of a new car?

Compare this! One 50HP conventional air compressor will cost you in excess of \$7.40 per hour to run. That's a total of \$18,648.00 (plus) over a 5 month winter in hydro costs, (not forgetting service and depreciation costs).

One of our equivalent performance low pressure compressors uses only 15HP and offers the same air flow. It runs at 14.5psi instead of 115psi and pushes out **oil-free** air bubbles all winter long for only \$5,645.00 in electrical energy cost.

You may even qualify for a 'Save on Energy Rebate' of up to 50% of the cost!

So the big question is, "Do you want to save \$13,000.00 in hydro and also the cost of those springtime repairs?"

The CompreVac Engineering Team are on hand 365 days a years to ensure that your investment is protected.

Contact us for all your low pressure compressed air needs.

Cracking and splintering ice breaking up all your docks will keep you wide awake. Gentle snoring, with the soothing sounds of a reliable CompreVac bubbler

system will give you absolute peace of mind!

Electricity prices are due to **double** in 3 years!!! Don't forget that up to 50% of your new investment could be provided by a Save on Energy Rebate!
